

Relatório – Laboratório Introdutório Wireshark

Samuel Abrão - 24101216

14 de agosto de 2025

1 Resultados

1. Três protocolos identificados antes do filtro HTTP

Na captura original (sem filtros), é possível identificar:

- HTTP
- TCP
- Ethernet II

2. Tempo entre o HTTP GET e o HTTP OK

O pacote **GET** foi identificado como número 5885 e o **HTTP 200 OK** como número 5928. Pelos registros de tempo, a resposta foi praticamente imediata (menos de 1 segundo). Para precisão absoluta, a diferença deve ser calculada a partir do arquivo de captura original.

3. Endereços IP

- IP do servidor `gaia.cs.umass.edu`: 128.119.245.12
- IP da máquina local: 192.168.43.158

2 Conclusão

O laboratório permitiu a observação prática da estrutura de uma requisição HTTP, desde a camada de enlace (Ethernet II), passando pelas camadas de rede (IP) e transporte (TCP), até a camada de aplicação (HTTP). Também reforçou a importância de compreender a sequência de pacotes e o uso de filtros no Wireshark para análise eficiente. (Print na próxima página)

/tmp/wireshark_wlp0s20f3EH4SA3.pcapng 7663 total packets, 4 shown
